

Sterling 9000

DECK & PORCH LIFT

The Sterling 9000 Deck and Porch Lift from Handicare is like no other lift on the market today. Built to meet the highest engineering and safety standards, the Sterling 9000 was designed with the end user in mind. Its unique features provide a convenient option for accessing a porch, deck or other raised area without the use of a long ramp system.

What separates the Sterling 9000 from the competition is its **twin rack and pinion drive system**, which provides a smoother, quieter ride, and is easily expandable to heights of 48" to 72". Simply add an additional tower section to the existing unit for a seamless expansion.

The **anti-slip platform** and **hand rail** gives users peace of mind while operating the lift. The **optional landing gate** adds extra security while entering or exiting the platform. Equipped with a DC battery system that comes standard, the Sterling 9000 is fully operational in the event of a power outage.

Choose a Sterling 9000 Deck and Porch Lift. During design and development, quality, safety and convenience were our top priority, as well as exceeding the expectations of our customers.
